CLEAR TARP CURTAINS

INSTALLATION DIRECTIONS

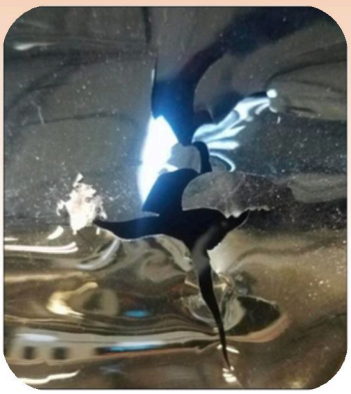

IMPORTANT

Carefully check the carton(s) for any damage. If you find damage, contact the shipping company right away.

PLEASE READ ALL INSTRUCTIONS BEFORE STARTING THE INSTALLATION.

STEP 1 - LET THEM WARM UP

If the outdoor temperature is cold, a**llow the curtains to sit at room temperature for 24 hours** so they can warm up properly. All PVC material becomes more brittle in cold conditions and is prone to cracking. This is especially true for folded PVC, which is necessary for shipping, since **the folds** are under significant stress.

STEP 2 - INVENTORY

Now that the tarps are warmed up, make sure you have all of your tarps. Compare your order confirmation and packing slips (if you have one) to the items you have received. Do not begin installation until you have all of the parts, as shipping carriers sometimes split shipments, or your order may be coming from more than one Gasketopia warehouse. Contact Gasketopia if anything is missing. Just email us at sales@thegasketopia.com for a faster service.

STEP 3 - HANG YOUR TARPS

If it is cold outside, let the curtains sit for 24 hours at room temperature so they can warm up. All PVC material can crack when cold because it becomes more brittle. This is especially true for folded PVC, which is necessary for shipping since there is a lot of stress on the folds.

Installing in the Cold
Installation in very cold temperatures and windy conditions is not recommended. If you must install under these conditions, keep the tarp as flat as possible (get some help) and avoid folding it. Tarps are designed to be used flat; if you fold or crunch them up, you may cause cold cracking.

QUICK TIPS

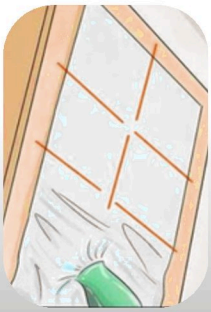

Don't let our TARPS whip around in the wind. This could lead to damage.

STEP 4 - GET THE FOLDS OUT

Installing in the Cold
Installation in very cold temperatures and windy conditions is not recommended. If you must install under these conditions, keep the tarp as flat as possible (get some help) and avoid folding it. Tarps are designed to be used flat; if you fold or crunch them up, you may cause cold cracking.

STEPS

Step 1: Hang your curtains.
Step 2: Using a steamer set to medium-high, slowly move it around the curtain.
Warning: Do not hold the steamer in one spot, or you could warp or melt the PVC.
Step 3: Continue this process across the entire curtain until the wrinkles have relaxed. That's it!

IMPORTANT

- If you need to store your tarps, never keep them in a hot location such as a hot garage or barn, as the PVC can shrink.
- If you are in a very cold environment, do not take the tarps down until you have the ability to warm them up first.
